GPT-4o Image Generation Style Profiles

This repository contains a curated collection of style profiles designed for use with GPT-4o's image generation capabilities.

What Are JSON Style Profiles?

JSON style profiles define specific visual styles and provide the image generation model with structured information to consistently replicate those styles across different prompts.

How to Use

To use a style profile, simply include the relevant JSON along with your image prompt. Instruct the model to reference the style profile to guide the image generation process.

Example prompt

```
Create image create an icon for a notes app the generates notes using ai
, the icon conatains a note book with a sparkle on it

reference the below style guide
{paste the json style profile}
```
